genomic sequence was searched against NCBI NonRedundant Protein database

with Bla57F ESTS represent the identified cDNA sequences using

Bla57N with the corresponding DBJ3 accession no.

Agene with identity or significant homology to a protein is

classified based on the protein but with full-length cDNA or EST homology to any protein but with full-length cDNA or EST homology to any protein but with full-length of partial galmost the enquence.

EST homology (covering almost the enti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 complement (1887. .2491)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    780
The present invention relates to beta-1, 3 glucanase polynucleotide and its encoding polypeptide obtained from 111y plant. The invention is useful for producing a transgenic plant with enhanced resistance against a wide variety of stresses particularly fungal attack such as Botrytis blight and gray mold. The polypeptide of the invention is also capable of degrading the cell wall of fungi and thus can be used as an antifungal agent. The present sequence is 111y beta-1, 3 glucanase CDNA, IPGlul
                                                                                                                                                                                                                                                                                                                                                                                                                                       9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance to a plant to be added to a plant to be a plant to be a plant to the present sequence was used to be a plant to be a plan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    t t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying at least one gene involved in plant resistance or response pathogenic infection for conferring resistance or tolerance to a plant bacterial, fungal or viral infection by determining or detecting plant gene expression.
                                                                                                                                                                        1021 ATTTGATCAGATGAAATATAAATAAAAGGTCTTATATTGTAAGGCAAAGCTCGTAATTGA

The patent discloses a method for isolating regulatory sequences using a beta glucanase gene. The regulatory sequence is used for tissue specific expression of endogenous and exogenous proteins obtained from monocot plants having drupaceous fruit. This promotes mesocarp specific expression thereby, increasing the amount of fat or altering the relative proportion of fatty acid in oil. Plants transformed with recombinant vectors comprising the regulatory sequence are used in food or pharmaceutical products. The present cDNA sequence is mesocarp specific clone C23 Gene specific probes derived from the C23 are used to isolate regulatory sequences from the mesocarp specific 1, 3 beta glucanase gene. (Updated on 15-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 TCGGCAATCCCGAGAGGCGTGGAATCCATTGGGTCTGCAATGGAATGGACGGTGACAAC 120

The invention relates a recombinant University of polymuclectide having any of 5544 nucleotide sequences (CDNAM SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 545-11088). The cDNAM and proteins are from corn, soyban, carbidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a producing a plant having an improved property, comprising transforming a production in a plant cell operably joined to a polymuclectide encoding a complexity is selected from improving plant cold tolerance, for manipulating growth rate in plant ells by modification of the cell cycle pathway, for improving plant drought tolerance, for providing increased resistance to plant disease, for improving plant tolerance to extreme osmotic conditions, for improvement by modification of carbohydrate, mitrogen or phosphorus use and/or outer and for yield and/or content, for modification of carbohydrate, mitrogen or phosphorus use and/or under at least one stress condition. The polymucleotide may also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biocemiles, in particular for producing transgenic plants with improved in the present invention are useful in the field of biocemiles, in particular for pathogens. They can also be used in physica
                                                                                                                                                                                                                                                                                                                                                                                                                         New recombinant DNA constructs useful in the field of blochemistry and genetics, and in particular for producing transgenic plants with improved biological characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  carerrrreseresecerresecerrerresasine carerreseare carrecases 155
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  invention. ```
New polynucleotides which hybridise with rice beta-glucanase genes useful for transforming monocot plants for various characteristics including increased resistance to fungal infection.
                                                                                                                                                                                                                                                                                                  (REGC ) UNIV CALIFORNIA
